IN SHORT What this report concludes

Your people and your tasting room are in good shape. The gap is that Commerce7 shipped a set of AI capabilities you are already paying for and nobody has switched them on, while the details of everyone who tastes with you and does not join the club are being thrown away. Fixing both costs nothing new in software. A third item saves you money, and a fourth stops tasting room calls ringing out to voicemail.

TOP PRIORITY

Switch on Guest Intelligence and wire it to club retention

RUN RATE

\$1,590 / month, down \$190

FIRST RESULT LANDS

Day 30

01 SCORECARD

Where you stand, in ten seconds

This is a written assessment of where Ridgeline is losing time and money to manual work, and where the tools and services you already own could close that gap. It scores four domains, ranks the opportunities worth acting on first, prices each of them, and names what you should not spend money on right now.

Not a quote, and not contingent on hiring us.

Build work is scoped and quoted separately, in writing, before anything starts. This report is yours to keep and act on, with us, with another provider, or on your own. Section 04 documents how we get paid and what we would earn on every recommendation in here.

GREEN working, no attention this quarter

AMBER works, but the gap will cost you

RED costing you money or exposing you to risk

SECURITY POSTURE

AMBER

Email filtering and endpoint protection are current and centrally managed. Backups run nightly and have never been restore-tested. Four harvest staff from last season still hold active Commerce7 logins, the tasting bar shares a single POS login across the whole team, and guest Wi-Fi runs on the same network as the point of sale.

- G Email security
- A Patch management
- A Endpoint protection
- R Backup & recovery
- G Remote access
- G DNS & URL filtering
- A Firewall & IPS
- A Mobile device management
- R Guest Wi-Fi separated from payments

INFRASTRUCTURE, CONNECTIVITY & SPEND

AMBER

No server left to worry about, and the internet at the property is better than most in the valley. The tasting room phone is a single line with no routing, so calls that come in during a pour ring out to voicemail. You are paying for a standalone email platform whose function Commerce7 already includes, and for eleven seats across a team of eight.

- G Server hardware
- A Cloud spend
- R Software licensing
- R Connectivity contracts
- A Storage
- R Phone system & lines
- G Internet & backup connection
- A Wi-Fi & network
- A Mobile devices & wireless plans

WORKFLOWS & AI READINESS

RED

This is where the money is. Commerce7 shipped Guest Intelligence, Ask Pip and WinePulse into your tier and none are switched on. A visitor who tastes and does not join the club leaves no record anywhere. Club billing is executed by hand over a weekend each month.

- R Intake & first response
- R Document & report generation
- R Data quality
- A Access permissions
- A Process documentation

PEOPLE & GOVERNANCE

GREEN

The team is willing and your DTC manager is already building her own workarounds, which is the best sign in this report. There is no written position on what staff may put into public AI tools.

- A License fit
- G Training coverage
- A AI usage policy
- G Change readiness

SCOPE OF THIS ASSESSMENT

We examined your Commerce7 back office, the tasting room POS, the reservation inbox, the phone line and Wi-Fi at the property, the last three months of software, phone, internet and connectivity invoices, and everything you described in the discovery session. We did not audit the production system, your financial records, or the compliance filings, none of which we were given access to. Findings are based on what you told us and what we could observe, not on a technical penetration test or a full asset inventory. Anything outside that boundary may still hold risk we have not seen.

BASELINE CAPTURED AT DISCOVERY

The numbers you gave us. Everything in this report is measured against them, and they are the yardstick for whether any work we do together actually worked. Nothing here is estimated.

MISSED INBOUND	TOP REPETITIVE TASK	SOFTWARE & COMMS	ONE LOST CUSTOMER
11	6	\$1,780	\$1,400
per week	hours per week	per month	value

02 RANKED FINDINGS

Scored the same way, then priced

Every opportunity was scored one to five on four criteria and ranked by the honest sum. Impact is hours or dollars per month. Feasibility is whether it runs on native integrations today or needs custom development. Data readiness is whether the information lives in one clean, accessible system or in paper, voicemail, and people's heads. Adoption risk is inverted, so an invisible back-office win scores high and anything touching a sensitive human moment scores low.

16–20 build now 11–15 phase two, after the first win is live ≤10 named and parked, listed in Section 03

#	OPPORTUNITY	SCORE	VERDICT
01	The AI you already pay for is switched off	18 / 20	BUILD NOW
02	One email platform, eleven seats, eight people	17 / 20	BUILD NOW
03	Tasting room visitors never reach the club	15 / 20	PHASE TWO
04	The tasting room line rings through to voicemail	14 / 20	PHASE TWO
BELOW THE LINE — NAMED AND PARKED, SECTION 03			
05	Chatbot on the website	8 / 20	PARKED
06	AI-written tasting notes	7 / 20	PARKED

FINDING 01 The AI you already pay for is switched off

WORKFLOWS & AI READINESS

EFFORT Switch on FIRST RESULT Day 30

COSTS TODAY	You told us 11 enquiries a week go unanswered and that a club member is worth about \$1,400 in the first year. The capability to act on both is already on your invoice.
THE FIX	Guest Intelligence and Ask Pip switched on in Commerce7, tuned to your club tiers, with WinePulse reporting going to the DTC manager weekly. Trigger is an existing club or purchase event, the systems are ones you already hold, the AI step is Commerce7 native, the destination is your own club record, and the human checkpoint is the DTC manager reviewing the first four weeks of output.
RUNS ON	Existing Commerce7 tier. Native features, already licensed. No new subscription.
WHERE DATA GOES	Nothing moves to a new vendor. Everything stays inside the Commerce7 tenancy that already holds your club data.
MONTHLY RUN RATE	\$0 / mo, included
ONE-TIME BUILD	Quoted separately
WHAT WE NEED FROM YOU	About two hours from your DTC manager in week one to review the first output, and a decision from you on which club tiers to prioritize. Nothing else.
WHAT COULD STOP THIS WORKING	If your Commerce7 tier were downgraded at renewal these features would go with it. Worth confirming the tier before we start.
PROOF IT WORKED	Missed enquiries per week, re-measured at day 30, and club churn at the next billing run.

FINDING 02

One email platform, eleven seats, eight people

INFRASTRUCTURE, CONNECTIVITY & SPEND

EFFORT **Configure** FIRST RESULT **Day 30**

COSTS TODAY	Part of the \$1,780 monthly software and connectivity spend. Three unassigned seats and one email platform duplicating a Commerce7 feature.
THE FIX	Reclaim the three seats and retire the standalone email platform, moving its lists into Commerce7 where the club data already lives.
RUNS ON	Existing licenses. Nothing new to buy.
WHERE DATA GOES	Contact lists move from the retiring platform into your own Commerce7 tenancy. No new vendor holds anything.
MONTHLY RUN RATE	-\$190 / mo
ONE-TIME BUILD	Quoted separately
WHAT WE NEED FROM YOU	A decision from you on which three seats to drop, and about an hour of someone confirming nothing lives in the retiring platform.
WHAT COULD STOP THIS WORKING	If any list or template only exists in the platform being retired, it has to be moved before cancellation, not after.
PROOF IT WORKED	Monthly software and comms spend, on the first invoice after cutover.

FINDING 03 Tasting room visitors never reach the club

WORKFLOWS & AI READINESS

EFFORT **Wire** FIRST RESULT **Day 60**

PHASE TWO

	1	2	3	4	5
IMPACT	■	■	■	■	■
FEASIBILITY	■	■	■	■	■
DATA READINESS	■	■	■	■	■
ADOPTION	■	■	■	■	■

15 OF 20 PHASE TWO

COSTS TODAY	6 hours a week, and the visitor details you told us are currently discarded.
THE FIX	Every taster leaves a record. Reservation and POS capture write to one Commerce7 profile, and a follow-up goes out within 48 hours of the visit. This is a wire between systems you already own, not a new tool.
RUNS ON	Existing Commerce7 and the tasting room POS. Reservation capture at the door.
WHERE DATA GOES	Name and email move from the POS to Commerce7. Both already hold your customer data. No card details are involved in the capture.
MONTHLY RUN RATE	\$0 / mo, included
ONE-TIME BUILD	Quoted separately
WHAT WE NEED FROM YOU	An hour from the tasting room lead to agree what gets asked at the door, and one shift of the team using it before it becomes habit.
WHAT COULD STOP THIS WORKING	This only works if the tasting room actually asks. If capture is optional it will not happen on a busy Saturday, so it has to be part of the close.
PROOF IT WORKED	Hours per week on the top repetitive task, and visitor-to-club conversion, both at day 60.

FINDING 04

The tasting room line rings through to voicemail

INFRASTRUCTURE, CONNECTIVITY & SPEND

EFFORT **Move** FIRST RESULT **Day 60**

COSTS TODAY	Part of the missed enquiries you told us about are phone calls that ring out while the team is pouring. Missed calls during tastings and events are counted in the 11 missed enquiries a week from your baseline.
THE FIX	Move the line to a hosted phone system that rings the tasting room, the DTC manager and a mobile at the same time, sends an automatic text to any missed caller, and plays a proper after-hours message with a booking link.
RUNS ON	A hosted phone service from a provider we work with. Keeps your existing number.
WHERE DATA GOES	Call records and voicemails stay with the phone provider. Missed-call texts contain no customer data beyond the caller's own number.
MONTHLY RUN RATE	TBC, pending provider quote
ONE-TIME BUILD	Quoted separately
WHAT WE NEED FROM YOU	Your current phone bill, and ten minutes to agree who the calls should ring.
WHAT COULD STOP THIS WORKING	Texting from a business number requires carrier registration, which takes time to approve. We start it in week one.
PROOF IT WORKED	Missed calls per week, re-measured at day 60.

03 PLAN & PROVIDERS

What to do first, and what not to buy

THE 90-DAY SEQUENCE

Days 1–30 • Guest Intelligence and Ask Pip switched on and tuned to your club tiers. • DTC manager owns the weekly WinePulse review; we handle configuration. • Human checkpoint in week one, out in week two once it holds up. • Three unused seats reclaimed. • Carrier texting registration started for the new phone line.	Days 31–60 • Tasting room capture wired through to a single Commerce7 profile. • Missed enquiries re-measured at day 30, hours per week at day 60. • Hosted phone line quoted, chosen and switched over, keeping your number.	Days 61–90 • Duplicate email platform retired once its lists are moved. • Missed calls re-measured after the phone switch. • Review against the Section 01 baseline. If it did not move, we say so first.
---	--	--

PROVIDERS CONSIDERED

The recommendation was settled before compensation was checked. Section 04 shows what we would earn on each.

PROVIDER	COVERS, AND WHY IT WAS OR WAS NOT RECOMMENDED
COMMERCE7	Covers Findings 01 and 03 with features already on your tier. Recommended, because switching vendors to solve this would cost money to replace something you already own.
YOUR CURRENT EMAIL PLATFORM	Retired under Finding 02. Its function is duplicated by Commerce7.
HOSTED PHONE PROVIDERS	Covers Finding 04. Two or more providers will be quoted side by side through our provider network, and the comparison will be in your comp log before you choose.
A DTC AGENCY RETAINER	Quoted at a monthly retainer to run club marketing. Ruled out for now: the capability is already in the platform and the work is configuration, not an ongoing service.

If the best fit pays us nothing

Three of the four recommendations pay us nothing, because the right answer was a capability you already own rather than something new to sell you. The fourth, the phone line, would be placed through a provider, and what that pays us is disclosed in Section 04 before you choose.

TOTAL MONTHLY RUN RATE

PROPOSED	CURRENT	DIFFERENCE
\$1,590	\$1,780	-\$190
per month, all priced findings	per month, from the baseline	reduction

Confirmed vendor pricing only, as of 9 March 2026. Anything unconfirmed is marked TBC rather than estimated. Vendor pricing moves, so treat anything older than 30 days as needing re-confirmation. Finding 04 pricing is TBC and not included in these totals.

PARKED — WHAT NOT TO DO RIGHT NOW

These scored ten or below. They are not bad ideas. They are bad ideas for Ridgeline this quarter, and here is why.

ITEM	SCORE, AND WHY IT IS PARKED
AI-WRITTEN TASTING NOTES	7 of 20. The brand voice is the product. A tasting note is the one piece of writing a customer reads as coming from the winemaker personally.
CHATBOT ON THE WEBSITE	8 of 20. Buying wine is a considered purchase and the first conversation matters. You named this one yourself in the session.

You asked about the website chatbot by name. It is on the parked list, and the reason is above.

04 HOW WE ARE PAID

The same answer every time

THE QUESTION	THE ANSWER
WHO PAYS YOU	Providers, not you. A commission at signing plus a small monthly residual. Your price is the same as signing direct, because the commission comes out of the provider's margin and not your invoice. We do not invoice you for the assessment, this report, or the matching. Phone, internet and connectivity services are placed through a master agent, which pays us from the provider's margin in the same way, and is named in your comp log.
WHAT COSTS MONEY	Build, integration and managed work, if you want it. Billed to you and quoted in writing before anything starts. Nothing is billable before day 30.
DOES PAY SHAPE ADVICE	No. We score the fit first, using the matrix in Section 02, then look at what it pays. If the best fit pays us nothing, you still get the best fit. The findings above were never reordered by commission size.
CAN YOU SEE IT	Yes. Every commission is logged separately from the recommendation record, and the log for your engagement is available to you in full, on request, at any point. No placement has been made yet, so nothing has been earned on this report. If you choose to place anything through us, we tell you before you sign whether it pays us and exactly what it pays. Ask for it at any time on (707) 480-9576 or chris@straticom.ai . The same policy is published at www.straticom.ai , so you can hold us to it in public as well as in private.

Straticom AI

STRATEGY · INTELLIGENCE · EXECUTION

NEXT STEP

Of the findings above, which one hurts most?

That is the conversation, and it is the only question we need answered to put a scope and a quote in front of you.

Chris Homer

Straticom AI · Sonoma County, CA
